Diploma of Data Science

- The University of Adelaide

“Frazer-Nash has given me exposure to a wide range of projects across a broad range of disciplines, including business and project management”

Current Role

I am currently a part of the System Safety and Assurance group in Adelaide. Within this role I have been able to contribute to several Safety Tool Development and Defence projects. Alongside this project work I have had exposure to the business and strategic decision-making aspects.

Why did you choose Frazer-Nash?

I chose Frazer-Nash for the opportunity to work alongside experienced engineers on a wide range of projects. Working within a consultancy offers the unique opportunity to develop both project management and technical skills as a graduate engineer. An opportunity that would not be as readily available in other technical domains. Another reason to join was the positive and driven work environment that encourages curiosity and learning. I feel encouraged to grow my technical and professional capabilities within a supported workplace that truly puts its people and clients first.

What training and development opportunities have you been given?

Training is readily available within the company, with a host of internal courses ranging from Core Business Development through to Project Management training. We are encouraged to seek out training in areas of interest that further our technical skills and are directly applicable to the business. The strong focus on technical and leadership development creates a stimulating environment for graduates to continue developing a wide range of skills.

What is the culture like at Frazer-Nash?

The culture at Frazer-Nash is one of the main reasons I chose to work here. Living by their core value “we care”, I immediately felt welcomed by the team and supported within the company. Working within a culture that promotes support, understanding, and compassion has been fundamental in feeling settled within my role and connected to my co-workers.
